LEAD PROGRAMMER & SOFTWARE DEVELOPEMENT

D.F. Mexico

Skype Name: • email@address.domain

Process Improvement • Operations Management • Business Improvement

Leadership/Management level software, apps, and server professional with a track record of successfully managing the entire product and process development life cycle from defining product road map to final implementation.

- Able to incorporate user needs into cost-effective, secure and user-friendly solutions known for scalability and durability.
- Innovator of solutions, systems and applications fueling major improvements to the bottom line.
- Proven leader by driving effective decisions, capable of managing projects to its completion with remarkable deadline sensitivity.
- Strong analytical skills combined with experience in object oriented programming techniques.

"Name is outstanding developer, has the insight to go above and beyond, will think of solutions to any issue and give you the options to choose what fits your operation, fantastic work."

One of the Customers praises

TECHNICAL BACKGROUND

Languages/Programming: C# and the .NET framework, Lua

Mobile development SDKs: Corona SDK, Xamarin.

Databases: MSSQL, MySQL, SQLite.

VALUED-ADDED SKILLS

- Developing software and applications utilizing programming languages, Database, methodologies, frameworks, and Web Services.
- Driving the entire system development life cycle including the analysis of specifications, implementation, production rollout, maintenance and support.
- Leading teams of developers, project managers and QA personnel including remote teams that delivered services and enterprise-class applications.
- Utilizing strong functional knowledge to drive product delivery and working with upper management to determine product direction, project plans and timelines, developing cost-effective budgets and resource plan.
- Developing workflow systems using needed technology, building successful consumer-facing applications for mobile devices.
- Programming
 - Back-end
 - Database
 - Desktop and Mobile applications
- Time Management
- Self-working
- Team-player
- Analysis
- Leadership
- **Languages:** English, Spanish, Swedish.

PROFESSIONAL BACKGROUND

CONTRACTOR

2010-Present

Programmer

- Develop, maintain and support backend programs and applications for Web and mobile systems using C#, MSSQL and Corona SDK (Lua) and related tools for different clients.
- Led programming tasks including enhancements, maintenance and support for clients' applications and interfaces. Engineered software and apps products, handling complex analysis and intricate programming to meet project requirements.
- Created several applications that connects with the user over the Internet and implements cloud services such as AWS, Azure, Parse, PubNub, Nancy and along with own implementation.

PROJECTS INVOLVED IN

Title: **Object ETL** – a software that was created and implemented on a chain of IT stores and their web site to exchange information.

Client: Multishop.se

Period: Oct 2015-Jan 2016

Contributions: Developed C# for a business to synchronize their three POS, a web shop, the products, prices and orders.

Results: Now the prices and their inventory are always up to date without any manual interference. This reduced the need to manually import and export price lists and inventory, which took 2 labor hours daily from their organization.

.....

Title: **Project Plan** – a Technical Project Plan for a company that was about to create and launch their own product.

Client: Eurasia Global Management Expert Sdn. Bhd

Period: Oct-Nov 2015

Contributions: Assisted in managing the whole project (freelancers, web sites, hardware schedules etc.).

Managed the reduction of the costs severely.

Created the Technical Project Plan and ensured every step was executed and delivered correctly, on time.

Directed team members [online freelancers] management, including contracting and tasks distributions.

Results: Created project plans by identifying tasks to be performed, necessary requirements, deliverables and milestones, as follow: STM32 microcontroller; application used on the established microcontroller; website with a backend cloud service; project execution; budgeting; and timeframe.

•••••

Title: **Outlook Plugin Parser** – an Outlook Plugin

Client: clfdistribution.com

Period: Nov 2012-Jan 2014

Contributions: Created and implemented the Outlook Plugin for a company that sells their product on different web sites and the orders are received by e-mail.

Results: The parser imports the e-mails from the different vendors, displays them in a GUI and the client can now send them out directly without having to manually import the e-mails and see directly how it affects his stock.

The application saves them several labor hours, not having to go through the e-mail manually, along with presents a better view of their inventory.

•••••

Title: **PineApp** – Chinese Pineapple Poker game

Client: Sole Proprietorship [mobile devices]

Period: Jan-Oct 2015

Contributions: Developed and finished the game for mobile devices created in Corona SDK (application) and C# (server).

Results: 6500 active users, during the testing phase we simulated 80'000 active users without any lack of performance on the server.

COMPANY NAME – City, Country

2008-2010

Strategic supply chain management software tailored for global manufacturing and distribution companies. Easy to learn, fast implementation, low risk & cost.

Country Support co-ordinator | Service Manager | Application Specialist & Programmer

- Recruited to manage the organization start-up.
- Co-ordinated office supporting software initiatives, enabling company to compete more effectively in the marketplace across the country.
- Played a key role as a Service Manager for Komatsu which included quarterly follow-up, financial follow-ups and strong customer contact.
- Performed assignments as a Senior Application Specialist as a backup and guidance for the current and new Application Specialists.
- Acted 100% as a dedicated programmer within the database team.

Key Achievements:

- Introduced a lot of improvement and deep integration between the different offices.
- Gained first satisfactory feedback as a professional partner on both the project and support side from one of the potentially biggest customers.
- In two months of management turned two biggest and most demanding customers to feel more than satisfied with the support which made it much easier for the customers to accept the invoices. *Result:* increased Syncron's revenue.
- Being the main programmer, worked together with the project team within T-SQL, for Syncron's new "Green SCP" module which included a lot of advanced algorithms and extensive coding.

EARLY EXPERIENCE

XPEEDIO – **Customer Responsible | Application Specialist**

2006-2008
